Hello Suat,

I checked your reference website (Autoscount24.com) and Its functionality. Yes, we will develop this platform using Laravel PHP framework as Backend and for front-end we will use React JavaScript library or Vue.js.

After review reference website we found this website consist of two significant part. Here we listed few main functionally of website.

1- **Light Motor vehicle**
   - Light Motor vehicle will have same website.
   - Buyer can browse the car.
   - Filter option will be there
   - There will individual page of particular Cars
   - There all Details will be mention As Attribute
   - Contact Details of the Seller will be available
   - If the seller wants to connect with buyers than there will be various options.
   - Wishlist and Save search will be available

2- **Heavy Motor vehicle**
   - Dealer Registration
   - Individual Seller Registration.
   - Seller can upload the Vehicle which want to sell with their required details
   - Admin will approve the Post, after that it can show on website.
   - After the approval the vehicle will show on the website
   - Buyer can browse the vehicle.
   - Advance Filter Option
   - There the all individual Details page will be mention As Attribute.
   - There will only direct phone no. contact details of the Seller, rest will form method.
   - Make an offer, Call me back, request viewing form will also available.

Timeframe: We need 10-12 weeks to complete application including your reviews and suggestion.

Technology: PHP Laravel Framework, React JavaScript library or Vue.js, SCSS

Project Budget: Web application development Budget Will be $1500- $2000.
